THE SOUND WIZARD

Looking for the newest and most efficient technology for playing music? Neutral Audio has it NOW.

X-Quantum

Double/Double Mono Multi-Preamp
ANALOGIC

The most evolved multipreamplifier

2 DREI tech duplex + 12 preamps + 10 power supplies

X-DREI

After-Pre External Module
DEINTERMODULATOR ANALOGIC
Harmonic Distortion Neutralizer

The Only one.

Best Seller

Essential in all High End audio systems
1 DREI tech + 6 buffers in parallel

PRO chassis also
available in 19"/1U

X-ONE

The Reference Multi-Preamp
ANALOGIC

A Bench mark audio with a unique sound

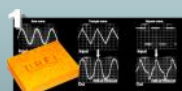

1 DREI tech + 6 preamps + 5 power supply

D.R.E.I.
TECHNOLOGY
& MULTI
PREAMP

D.R.E.I. tech module (Dynamic Reduction of Electronics Interactions) included in all our equipment guarantees a neutral, clean analogical sound, with unmatched resolution, detail and warmth. We also offer new and original technologies to enhance musical playback pleasure and obtain maxima fidelity. This is the most important development in the High-End environment and the professional sector in recent years. No digitizing of the music, purely analog techniques involved.

We increase the performance of any sound system significantly and:

1 We designed the
D.R.E.I. technology.

2 We have developed
Multi-Pre-Amplificación

3 We offer **Soundstage** adjustment, providing maximum synergy between the speakers and the room/hall without using digital techniques.

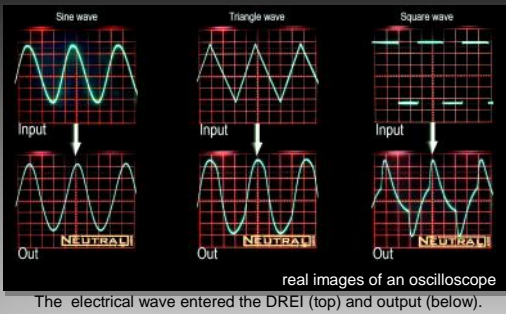

4 We have created a new category, the **After-Pre** (external module).

Neutral Audio delivers the best sound but you do not have to believe us, just listen to it and rely on your own senses.

1 D.R.E.I. TECHNOLOGY

DEINTERMODULATOR
Harmonic Distortion Neutralizer

Its insertion provides greater sound performance, music flows naturally, on beat, soft, neutral and crystal clear.

Speakers can only reproduce sinusoidal type waves due to electromechanical limitations. DREI sends only pure musical signals without any loss of detail, to amplifiers, filters and speakers increasing their overall performance and dynamics. No digital techniques are used!

It also performs other "functions" that are Neutral's secrets.

Current technology

OUR BLACK BOX

Neutral audio technology

Other Drei functions shown in this diagram permits **Multi-Preamp.**

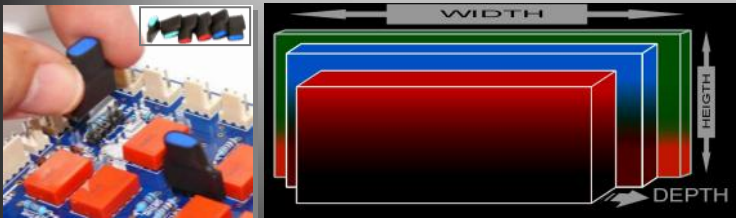

Musical signals enter the device and once treated are sent to various independent preamplifiers, between 2 and 12 which are dynamically controlled by D.R.E.I. The outputs of the different preamplifiers are remixed in a wholly passive way and without any other additional active circuits, so as to exclude electronic interactions outside D.R.E.I.'s control.

X series is the only exception preamp to incorporate this exciting new technique and shows Neutral Audio is capable of contributing to audio.

To achieve maximum synergy with the rest of the system and the room/hall, you can adjust the soundstage using coloured items supplied or an external switch on X-DREI to vary the soundstage's width, depth and height and to control the impact of the lower notes.

The soundstage is 3D. We use the dynamic control over the impulse response of each of the different preamps / buffer parallel to adjust the stereo system's overall performance, resulting in a neutral sound as direct and real as possible.

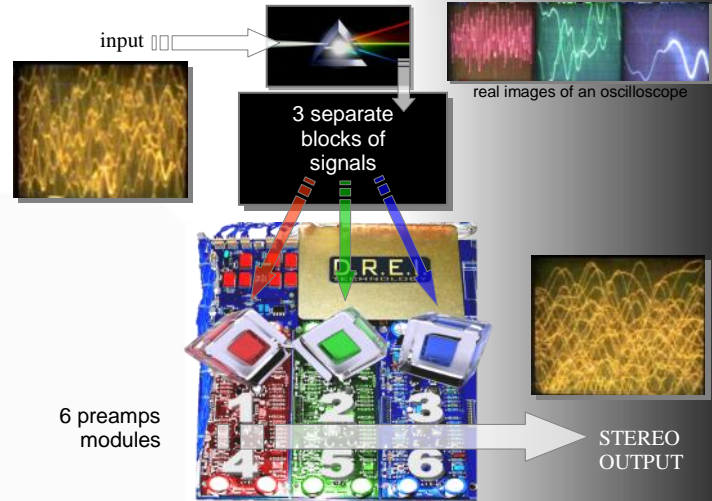

2 MULTI PRE-AMPLIFICATION

Behind this concept lies a second factor (after DREI tech.) the fabulous sound of this series. Up to 12 preamps get a far more accurate reproduction than the current parameters.

- 6 preamps in X-ONE
- 12 preamps in X-QUANTUM
- 6 buffers in X-DREI

The sound deviations produced by the error tolerances of electronic components are checked and corrected as far as possible. The passive mixing of all the amplified outputs to a stereo signal provides crystal clear sound without the deterioration caused by intermodulation, giving exceptionally pure, warm music, full of the original recording's details.

3 Soundstage

4 New Product Category X-DREI After-Pre

External DEINTERMODULATOR
Harmonic Distortion Neutralizer

High-End model

The Only one. A New and original product and our best seller. You don't have to replace anything, you just add our D.R.E.I. technology.

This is not a preamp, it has no volume control and no input selector. It is simplified version of our analogical multi-preamp technology but with the full power of the DREI tech module included, to be connected between preamp and the power stage (or source/preamp). **It is undoubtedly the best and most cost-effective audio system upgrade available in the Audio market.**

6 high performance buffers operating in parallel, each with a block of the signal, controlled by the DREI tech module, produce an awesomely **pure, crystal clear musical signal.**

Among other interesting features, it helps you get the most out of your speakers and your music room, you can listen to music without ear fatigue and note many more details in your favorite recordings without changing your system!

You'll wonder why you had not installed it before!

In the X-DREI After-Pre external module, you can change the soundstage using the switch on the rear panel (front in the PRO).
